

Best management practices produced by FireSmart Canada and the Canadian Association of Petroleum Producers identify high exhaust system temperatures as a significant wildfire risk that must be mitigated. FPS ENVIRO™ helps mitigate this risk.

Protecting Homes & Preserving Communities

FPS ENVIRO™ – Provide a safe and effective ground fuel-break.

#### WHY FPS ENVIRO™?

Wildfires can be ignited by extreme temperatures, sparks and flame. FPS ENVIRO™ is a robust shield used for ground coverings and field work stations. It isolates extreme heat from underlying combustibles. It is ideal for establishing a fuel-break from spreading fire.

#### WHAT IS IT MADE OF?

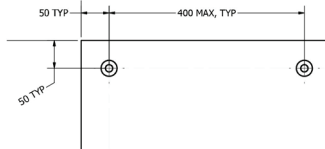

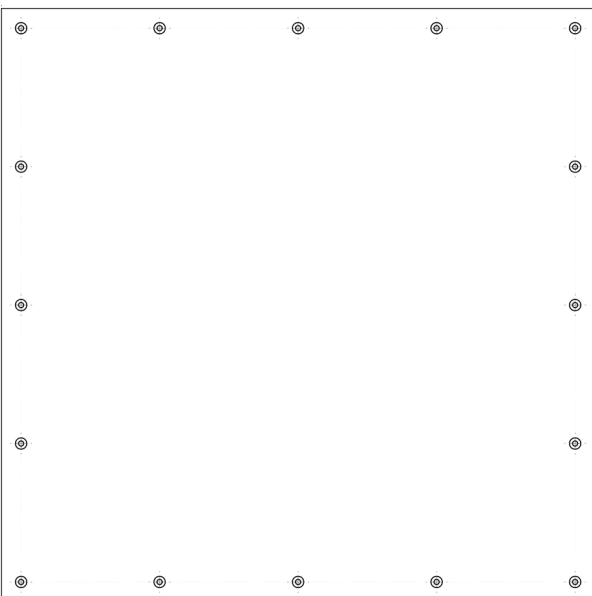

FPS ENVIRO™ is made of extremely fire-resistant textile, siliconized for its' durability, abrasion and chemical/oil resistance.

#### WHAT CAN FPS ENVIRO™ DO?

Our products are manufactured using materials and processes that are industry proven to protect. FPS ENVIRO™ prevents ignition of combustibles from spreading wildfire and embers travelling downwind. FPS ENVIRO™ used as a field work station isolates high temperature exhaust and hot equipment from underlying combustibles such as tall grass or accumulated debris.

#### WHERE CAN I USE IT?

FPS ENVIRO™ can be used for activities conducted in forest or grass lands where hot equipment in proximity to combustible materials on the ground increases the risk of wildfire. It can also be used as an effective fuel-break for an approaching fire.

SIZES	PRICING* (CAD)
1.5m x 1.5m (5' x 5')	\$108.25
3m x 3m (10' x 10')	\$419.00
6m x 6m (20' x 20')	\$1,560.00
10m x 10m (33' x 33')	\$4,575.00

Custom designs upon request.

\*Pricing subject to change and to be confirmed at time of order.

Excludes taxes and delivery.
